

Hi Team,

Working with the investment analytics group for the past 4 months has been a great experience for me and I am really excited at the opportunity to become a permanent member of this team.

My enthusiasm to continue in this role stems from the smart people that I have met and the high quality of work this position entails. The commitment of all its employees to do what is best for the patients has been truly unique and inspiring to me.

As an intern, I have worked on multiple projects of coupon design, promotional effectiveness and clustering for a pilot. These projects challenged me to explore newer concepts (panel regression modeling) and technologies (AWS) and expand my area of expertise in healthcare analytics. While doing so, I have always demonstrated grit and willingness to learn. Through use of efficient project management skills I have been able to move swiftly across these different projects and complete them.

A key driver of this success in internship and the future role at Merck is my 3 years of experience with ZS Associates. I have evolved from being an individual contributor to a team lead driving business intelligence projects from the requirement gathering phase to execution. This experience has helped me in building a strong understanding of healthcare data, analytics, and its support in driving insights across different functional areas.

I believe that my professional experience and abilities to create value for the team will prove me as a strong fit for this position.

Regards,
Ambika Rana
